UAprog Motor Programmer

UNADA

2 WIRE

3 WIRE

UNADA APPLICATION PROGRAMMER FEATURES

- Program Speed, Direction, Upgrades.
- Interrogate motor.
- Program over the power cable - simple procedure without compromise.

INSTALLATION

Installing the Unada motor configuration software is a 3 step process.
Warning : Do not connect a motor to the programming box until all steps completed.
In the event any step is unsuccessful please see fault finding guide at the bottom of this page.

Step 1   Install Interface Box Drivers
Power up and plug in the programming box, allow windows to automatically search for
and install driver.

Step 2   Installing the Unada Configuration Software
2 Wire - UC Fly: https://s3-ap-southeast-1.amazonaws.com/unada-singapore/UnadaSandflyConfig.exe
2 Wire - UC+, UC 12 and UC Hi Speed: https://s3-ap-southeast-1.amazonaws.com/unada-singapore/
UnadaOneWayConfig.exe
3 Wire - UC12, UC+, UC Hi Speed and UC1: https://s3-ap-southeast-1.amazonaws.com/unada-singapore/
UnadaMotorConfig.exe
3 Wire - UC Max: https://unada-singapore.s3-ap-southeast-1.amazonaws.com/
UnadaMultistateMotorConfig.exe

Download this file and save it to your preferred location.

Step 3   Running the Software
1) If not still connected, connect the interface box to PC/Tablet.
2) Run the config. Software
You can now connect a Unada motor to the programming interface box.

TROUBLESHOOTING

Step 1   Install Interface Box Drivers
In the event that the driver does not install automatically it is possible to install it manually

Click the link https://drive.google.com/file/d/0B8fOaUZA05URZzVGQ1RSTU1uUXc/view?usp=sharing
Choose "setup executable" from the comments column, which will pick the correct driver for your version
of windows and follow the download and install prompts.

Step 2   Running the Software
If an error messege appears when opening the config software.
Close the motor config dialogue box.
Check the interface box is connected correctly both USB and power pack.
Re-run config software.
